MK Email Size Limiter

For IBM Notes

Centrally define, manage and enforce powerful email usage policies

With MK ESL your IBM Notes users know and respect the email usage, rules, volume limits and quotas you have defined centrally.

MK ESL does not require any Notes template modification.

MK ESL policy controls are performed on the workstations.

MK ESL rules take into account the number of email recipients including in groups and nested groups.

MK ESL is managed centrally.

Lack of email usage control most often results in critical IT resource waste and Notes administrator time drain for IBM Notes-using organizations.

MK Email Size Limiter implements a new, unique and extremely efficient way to enforce email usage policies, by controlling the emails being sent at the source, at the time the users press the Send button, without having to first send the non-compliant emails to the Domino server.

Non-compliant emails are so instantly blocked before to be sent (a dialog informing the user about the reasons of the non-compliance is displayed) and put back in Edit mode.

More than 30 rules are available enabling you to create powerful and efficient email usage policies (as many as you need) to be allocated to Notes groups and users.

Here are examples of MK ESL rules that can be combined into policies:

- Prevent sending emails having a size over a given limit
- Prevent sending emails for which <Email Size x Number of Recipients> exceeds a given limit - (including nested groups)
- Prevent sending emails having a size over a given limit to more than one recipient
- Define quotas of email sent per month (in MB), including a Windows utility displaying the percentage of quota already consumed in the Windows task bar system tray
- Prevent sending emails to too many recipients (including nested groups)
- Define Maximum email sizes based on recipient addresses or domains (including nested groups)
- Prevent sending emails to some recipients or domains (including nested groups)
- Prevent sending emails containing attached files of given types
- Automatically set email priority to low for emails over a given size
- Manage per group database quotas (on used space or nsf size, on server and/or local databases)

Each rule can support a soft limit (warning) and a hard limit (forbidding the sent of the email) and can be applied when sending emails and/or when saving emails.

All MK ESL dialog captions are customizable.

Policies are managed centrally and automatically distributed to the Notes clients.

Detailed MK ESL usage statistics are made available to the administrator, enabling to fine-tune the policies.

MK ESL does not require any Notes template modifications.

A server version of MK ESL using the same MK ESL admin database is available to put emails from external SMTP users and emails sent by non-Notes email clients under control.

The immediate benefits provided by MK Email Size Limiter are:

- Reduction of email server storage and network saturation as well as of the Domino server crashes by limiting the maximum size of emails and the maximum size of emails sent to many recipients.
- Full compliance of your Notes organization in adhering to the MK ESL volume policies, with no need for user education.
- Reduction of Administrator and user time spent in resolving large email issues.
- Policies are instantly applied on the workstations. No need for the email to be sent to the Domino server.

MK ESL is an extension to the IBM Notes Client, versions 5.02b to 9.x. It is a single DLL file (less than 300 KB), provided in an automatic setup package for instant deployment. It has both an incredibly low memory and resource footprint.

MK ESL is a product of MK Net.Work, the vendor of the global leading ZipMail family of compression solutions. For more information on MK ESL, ZipMail and other Notes optimization software offered:
